

Bulletin of Labor Force Survey Results 2014

**Population Statistics Section
October, 2015**

Introduction

The statistics of labor force have a great importance in providing basic information about the workforce size and their social, economic and demographic characteristics, which in turn, make the planning to the development of human resources possible and identifying the available workforce size during a specific period of time, and its convenience to the requirements and needs of the labor market, in addition to recognizing the level of training, qualification and skills among the population. The data collected during different times constitute the base to monitoring the current trends and the changes on the labor market and the positions of employment; in addition to these data, the other data about the economic aspects of the national economy constitutes the fundamental base to analyzing and evaluating the microeconomic policies, where the unemployment rate became, for example, one of the most important standards of the current performance of the national economy.

In the framework of the strategic plan of the Dubai Statistics Center, which considers that one of the most important priorities of the center is to provide the necessary statistical support to implement Dubai Strategic Plan 2015, in the light of the strategic transformation and the accelerated growth witnessed by Dubai in all sectors and at different levels, this support is represented in providing the statistical data on the various economic, social and demographic types with accuracy and right timing.

In this context, Dubai Statistics Center gives a special importance to providing comprehensive statistical data about the labor force on a regular basis, according to the latest methodologies and international standards which enable the policy-makers and the decision-makers to planning for developing the human resources and control on the macroeconomic performance, and also provides a modern database and made it available to data users like researchers, businessmen and others consistently.

Dubai Statistics Center is pleased to issue this bulletin about the results of labor force survey, which was executed by the center in 2014. It comes within a series of releases and periodic statistical reports covering the results of statistical surveys which was executed by the center periodically within its annual plan.

Preface

In 2014, Dubai Statistics Center conducted a specialized survey about labor force within a series of economic, social and demographic surveys that are executed periodically within its annual plan, and taking into its account, during design and implementation, the latest methodologies and international standards. The main objectives of this survey have been determined as follows:

- Estimating the labor force size.
- Estimating the participation rates in the economic activity according to the various characteristics such as age, sex, level of education and scientific specialization, marital status, professional structure, training, wages levels and the work average of hours and days per weekEtc.
- Identifying the extent and levels of unemployment and estimating the rates of unemployment and dependency ratios according to the different characteristics.
- Identifying the social, economic and demographic characteristics for the job seekers and their bearings.

The sample of the survey included the Emirati Households, non-Emirati Households, collective household and communities of workers, the sample size was (4,000 Households) distributed as follows: (2,000) Emirati Households and (2,000) non-Emirati Households, and also the communities of workers were (1,000) worker, it should be noted that the social, economic and demographic characteristics are the same characteristics which resulted from the sample;

And due to the fact that the survey was carried out in a special way, so, the samples must have had differences between the characteristics of the samples after enlarging the results and the characteristics previously estimated for the population such as the census, administrative records or from any other source. These differences are attributed to two main reasons: 1. random errors 2. Systematic / Bias errors, so, these types of error repeated in all results of surveys executed in a sample system, the volume of these errors may differ from survey to another.

The main results of the Labor Force Survey 2014

First: The characteristics of the population 15 years and over

The international labor organization (ILO) classified the population who aged or exceed the minimum level of measuring the economically active population "the age of fifteen" into three separate groups as follow: Employed and unemployed they are called **the labor force or economically active population**. The third group is the people who are not part of the labor force, if added to this group "third group", the population less than the minimum level of measuring the economically active population – a group of children under fifteen – they will constitute what called **economically inactive population**. The following presentation will be limited on the population permanently residing in Dubai, who are fifteen years and over, with reference to that the size of the labor force does not include the employees in Dubai and who reside in other emirates whose number is estimated about 875,000 workers, most of them non-UAE and constitute 36.5% of the total size of the labor operating in Dubai, which amount 2.4 million employees.

1. Population 15 years and over who are economically active

The percentage of the economically active population (employed and unemployed) residing in Dubai, according to the survey results, reached to **81.9%** of the total population 15 years and over in 2014, this percentage represents what is called the rate of the revised economic activity. On the other hand, the rate of the crude economic activity has reached to **69.2%** of the total population permanently residing in Dubai, which amount (2,327,350) individuals in 2014, the data table (01-01) shows the relative distribution of the population 15 years and over who economically active between the UAE and non-UAE as follows:

- The percentage of the Emirati population of 15 years and over who are economically active reached to **49.1%** of the total population of UAE 15 years and over, this percentage is the rate of the revised economic activity between the UAEs, this rate is different between males and females where the rate of the revised economic activity between Emirati males and females has reached to **63.7%** for males vs. **35.5%** for females.
- The percentage of the non-Emirati population 15 years and over who economically active reached to **84.5%** of the total non-Emirati population 15 years and over, this

percentage represents the rate of the revised economic activity between non-Emirati where the rate of the revised economic activity between Emirati males and females has reached to **96.5%** for males vs. **49.4%** for females.

2. Population 15 years and over who economically inactive

The percentage of the population of 15 years and over who are economically inactive has reached to **18.1%** of the total population of 15 years and over. This group is distributed between the UAEs and non-UAEs population 15 years and over, as follows:

- The percentage of Emirati population 15 years and over whom economically inactive **50.9%** of the total UAE population 15 years and over, where the percentage of the economically inactive males reached to **36.3%** of the total males, while the females' ratio was **64.5%** of the total females.
- The percentage of the non-Emirati population 15 years and over who economically inactive reached to **15.5%** of the total non-UAE 15 years and over, where the percentage of the economically inactive males has reached to **3.5%** of the total males, while the females ratio was **50.6%** of the total females.

Activity Status – Emirate of Dubai

2014

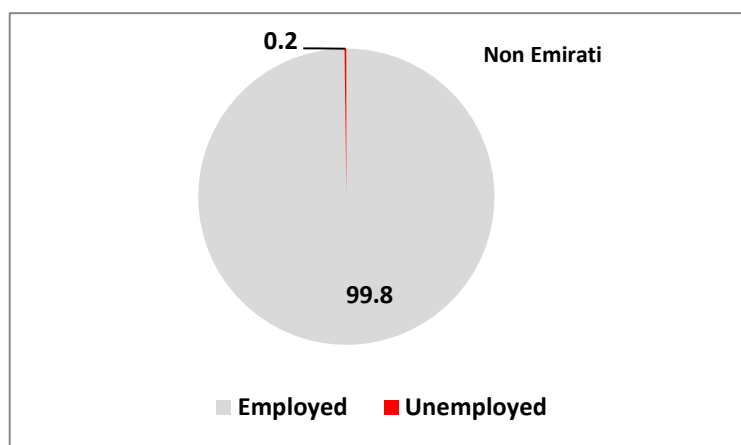

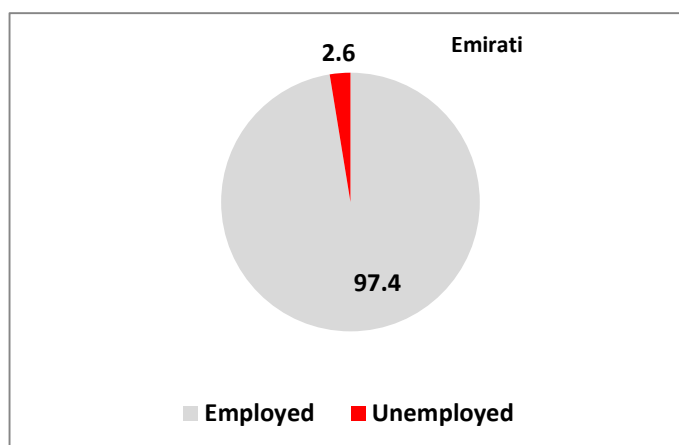

Second: The population of 15 years and over who are economically active

In this group, the population is classified to employees and unemployed, which is usually called the name of the workforce. The data contained in the table (01-01), shows:

- The rate of the employees in Dubai formed **99.7%** of the total economically active population while the percentage of unemployed "unemployment rate" in Dubai reached to **0.3%** for 2014.
- The percentage of UAEs employed reached to **97.4%** of the total economically active population, while the percentage of UAEs' unemployed reached to **2.6%**, these rates represents the **unemployment rate among UAEs**. Unemployment rates are varying between UAEs' males and females where males have reached **1.9%** only while females have reached to **3.7%**.
- The percentage of non-UAE employed is about **100.0%** of the total UAEs' economically active population, the reason of increasing this percentage due to that a large number of the non-UAE population have an economic activity labor. The rate of unemployment among non-UAE is less than only **0.2%**, where males reaching to **0.1%** while females reaching to **0.5%**.

Percentage Distribution of Population Economically Active by Nationality – Emirate of Dubai
2014

Employees

The survey provided a comprehensive database of the different employee's characteristics like age, education, marital status, position of the labor force and they distribution according to occupations, economic activities and other characteristics. Most important of these characteristics will identify, as follows:

Employees 15 years and over by age groups

- The employees are concentrated in the age 20 – 49 years, the percentage of employees in this group reached to **91.0%** of the total employees, this percentage is higher in females than males where the ratio was **93.0%** among females while **90.6%** among males.
- The percentage of UAE's employees in this age group reached to **88.0%**, where reaching to **94.2%** among females while reached to **84.4%** among males.
- The ratio between the non-UAEs' employed reached to **91.1%**, where the ratio reaching to **93.0%** among females while reached to **90.9%** among males.
